

Installation of Faucet

1. Using a small drill bit, drill a pilot hole.
2. Using the 10mm drill bit, drill a hole through the base metal. Operate the drill slowly and carefully, especially when the drill is about to penetrate the metal. If necessary use a drop or two of oil in the hole.
3. Mount the sink top faucet in the hole and using an adjustable wrench (or hand) to hold the faucet, tighten the 9/16" nut.
4. Connect the tube from the outlet side of the twin system (this is the carbon cartridge side of the twin system) to the faucet.

Start Up Procedure:

1. With everything connected, turn on the water check for leaks.
2. Let the water run for at least 5-10 minutes. This flushes the carbon filters on first time use.
3. Close the sink top faucet. Check the system for leaks.
