

# Counter Top Water Filter

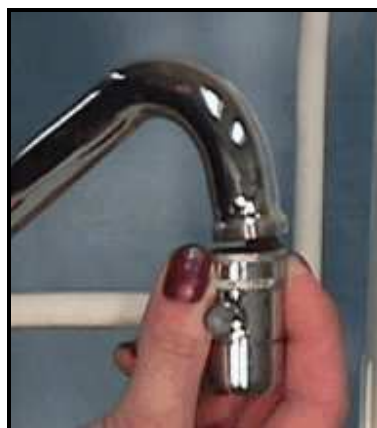

## Installation Instructions

Countertop water filters come with a diverter valve that attaches directly to your faucet spout

**Diverter Valve**

- \* Simply install the diverter valve in place of the faucet aerator and you are ready to filter tap water on demand

**Attach valve to faucet**

- \* Once you have attached the diverter to the faucet, flush water through for approximately 60 seconds and you can then start enjoying clean, healthy water
- \* Connection to the faucet with an easily attachable diverter valve means no permanent modifications to your kitchen or bathroom sink necessary!

*No plumbing required!*

- \* Depending on the quality of your water, it is recommended that filter cartridges are replaced every 6 - 12 months, or when taste / odor issues arise.

Replacement cartridges available through:
